A.M.I. ATOMS System

The treatment of stress urinary incontinence in males still presents a considerable challenge, with a significant percentage of radical prostatectomy patients remaining incontinent 6 to 12 months after surgery.

Designed for transobturatoric implantation, the A.M.I. ATOMS System now combines a minimally-invasive and low-risk method with the option of easy pressure adjustment.

- The two-part system consists of a mesh implant with integrated adjustable cushion, and an implantable titanium port for adjusting the cushion volume
- The macroporous mesh of monofilament polypropylene promotes optimal tissue growth
- The system requires no additional fasteners or screws to be secured in place
- The system is suitable for all degrees of stress urinary incontinence

General Information

In addition to the workshop, A.M.I. provides:
- transfers Bilbao airport - hotel - hospital - hotel - airport where required
- one evening meal
- accommodation including breakfast (2 nights maximum)

The closest airport is Bilbao airport, which offers direct connections from several European cities including London, Paris, Munich, Frankfurt, Amsterdam and Brussels, or indirect connections from all other places via Madrid or Barcelona.

Workshops will be conducted in English. Therefore a sound working knowledge of this language is a pre-requisite for attendance.

Treatment of Male Urinary Incontinence with the A.M.I. ATOMS System

International Workshop Programme 2012

in co-operation with the Urología Clínica Bilbao - Clinica IMQ Zorrotzaurre Bilbao, Spain

International Workshop on use of the A.M.I. ATOMS System for treatment of Male Urinary Incontinence after Radical Prostatectomy

The Urología Clínica was founded by a group of urologists sensitive to the need for a change to the administration of health care in the private sector. Their aim was to create a specialised facility providing urological treatment and services in an integral, effective manner.

Today, the group enjoys an excellent reputation for its high level of expertise, state-of-the-art technology and strong focus on the individual patient, and aspires at all times to provide medical treatment based on the solid principles of respect, efficiency and quality.

Together with the Clínica IMQ Zorrotzaurre, the Urología Clínica is pleased to offer the opportunity to learn more about this promising new form of treatment for male urinary incontinence.

Urología Clínica

Lecturer / Course Director
Dr. Ander Astobieta (right)
Head of the Functional Recovery Unit, Urología Clínica

Team:
Dr. Gaspar Ibarluzea
Dr. Gregorio Pereira
Dr. Mikel Gamarra
Dr. Asier Leibar
Dr. Guillermo Olaizola

Date

Thursday October 18 - Friday October 19, 2012

Contents

- Introduction to the ATOMS Implant
- Discussion and comparison with other treatment options for stress urinary incontinence in males
- Live ATOMS implantations
- Implantation technique
- Presentation and discussion of preliminary results

Lecturer / Course Director

Dr. Ander Astobieta
Head of the Functional Recovery Unit, Urología Clínica

Registration

Registration is compulsory. Attendance is limited to a maximum of four participants. Please contact A.M.I. GmbH or your local A.M.I. distributor for further details.

Location

Urología Clínica Bilbao
Clínica IMQ Zorrotzaurre
Calle Ballets Olaeta 14
48004 Bilbao
Spain
